ASSET-BASED CARRIER · POMONA, CA & PHOENIX, AZ

Our trucks. Our drivers. Your freight, on time.

LDI Trucking moves dry van and container freight across Southern California and Arizona with a company-owned fleet run out of Pomona and Phoenix. One dispatch team, one phone number, every load.

Figures from public FMCSA records; LDI to confirm before launch. Photo of the real fleet would replace the illustration.

AUTOMATION BEHIND THIS

Numbers that never go stale

A weekly scheduled job pulls LDI's carrier record from FMCSA's public QCMobile API (fleet size, safety rating, authority status) and updates this strip automatically. The same data feeds the CSA monitor on the Safety dashboard.

[FMCSA QCMobile API](#)[n8n / Power Automate schedule](#)

WHAT WE HAUL

Full-truckload capacity with one point of contact

Company drivers in company trucks, so we don't broker your freight to strangers. Draft service copy; LDI to confirm exact services and lanes.

Dry van truckload

53' dry van, full truckload, general commodities. Live load or drop trailer.

Container freight

Container moves between Southern California ports, rail ramps and Inland Empire warehouses.

Power only

Our tractor and driver, your trailer. Flexible capacity for shippers and 3PLs with their own equipment.

Hazmat-certified

Endorsed drivers and a compliance program for regulated freight.

Broker & shipper onboarding

Download our carrier packet without waiting on an email.

Carrier packet

W-9

Certificate of insurance

⚙️ AUTOMATION BEHIND THIS

Quote requests reach dispatch in seconds

The form posts to a webhook that logs the request (Excel/SharePoint list or the TMS), emails the shipper a confirmation with a reference #, and alerts dispatch in Teams with a suggested rate pulled from LDI's own history on that lane. Quotes with no reply get an automatic follow-up after 24 hours; won/lost feeds the management dashboard.

Webhook → n8n / Power Automate Teams alert Lane history in SQL/Excel

⚙️ AUTOMATION BEHIND THIS

Self-serve PODs and an always-current carrier packet

When a driver photographs the signed BOL/POD, an AI document reader extracts the load #, consignee, signature and any exception notes, files it under the load, and makes it downloadable here. "Can you send me the POD?" emails stop, and billing gets the same file instantly.

Insurance expirations are tracked, so the carrier packet and COI regenerate automatically when a policy renews.

OCR + vision model Human review for low-confidence fields

DRIVE FOR LDI

Local CDL-A jobs. Home every night.

Company driver positions out of Pomona with morning and evening starts. Apply in two minutes from your phone, and a recruiter calls you back the same day.

Local CDL-A Company Driver

AUTOMATION BEHIND THIS

Speed-to-lead for driver applicants

Drivers apply to several carriers the same day, and the first one to call usually wins. On submit, the applicant gets an instant text and email, lands in the recruiting tracker with a basic qualification check (CDL class, experience, endorsements), and the recruiter gets a "call now" alert. Unfinished applications get automatic text nudges on day 1, 3 and 7.

SMS + email

Recruiting tracker / CRM

Follow-up sequence

AUTOMATION BEHIND THIS

Paperless onboarding

The follow-up link collects the CDL, medical card and signed consent forms from the driver's phone. OCR reads the expiration dates straight off the documents and starts the driver qualification (DQ) file checklist automatically, with no retyping. Missing items trigger reminders to the driver, not to the recruiter's to-do list.

Mobile upload

OCR date extraction

DQ file checklist

DRIVER HUB

Everything current LDI drivers need, from their phone

Upload BOL / POD

Snap a photo at the dock. It's filed to your load.

Upload receipts

Lumper, scale and toll receipts for reimbursement.

Renew medical card

Upload your new card before the old one expires.

Settlements & pay

Settlements and pay stubs.

Policies & handbook

Safety policies, procedures, forms.

Who to call

Dispatch, safety, payroll, after-hours.

AUTOMATION BEHIND THIS

Paperwork that files itself

Every upload is read by AI. A BOL/POD is attached to the load and its invoice packet; lumper and scale receipts are matched to the load as billable accessories; a renewed medical card updates the compliance tracker with the new expiration date. Missing signatures or unreadable photos trigger a text back to the driver before they leave the dock.

Vision model extraction

Load matching

Invoice packet builder

AUTOMATION BEHIND THIS

Driver assistant (optional, phase 3)

A text-based assistant answers "who do I call for...", "when is payday?" and handbook questions using only LDI's own documents, and hands off to a person for anything else. Only worth building if the shadowing phase shows these questions eat real dispatcher time.

Answers from LDI docs only

Our credentials are public, and we keep them current. Shippers and brokers can verify everything below on FMCSA's SAFER system.

[View our FMCSA record](#)

FMCSA safety rating	Satisfactory
Operating authority	Active · interstate
Hazardous materials	Certified
Drug & alcohol program	FMCSA Clearinghouse

AUTOMATION BEHIND THIS

Expiration tracker (best first project)

One list of everything that expires: CDLs, medical cards, annual MVR reviews, Clearinghouse queries, truck and trailer registrations, annual inspections, IFTA/IRP and insurance COIs. Automatic reminders at 60, 30 and 7 days to the driver and Safety, escalation when something is overdue, and a Monday "expiring in the next 30 days" email to management.

[Excel / SharePoint list](#) [Power Automate or n8n](#) [SMS + email reminders](#)

AUTOMATION BEHIND THIS

CSA monitor

A weekly pull of LDI's FMCSA inspection data flags new inspections and violations by driver and unit, so Safety can coach early instead of finding out when scores move.

AUTOMATION BEHIND THIS

Inbox triage for every shared mailbox

Every message, from this form or emailed to a shared inbox, is classified by AI (quote request, POD request, invoice or payment question, rate confirmation, applicant, vendor) and routed to the right person or queue, with attachments saved to the right load folder. Routine replies like "POD attached" or "application received" go out automatically; anything else is drafted for a person to approve.

[Microsoft 365 / Outlook](#) [Power Automate](#) [LLM classification](#) [Human approval for anything non-routine](#)

AUTOMATION ROADMAP

The website is the front door. Most of the value is behind it.

These are the automations I'd prioritize, based on the AI & Automation Specialist posting and where a ~140-truck carrier usually loses staff time.

Each one gets checked with the people who do the work today before anything is built; the plan starts by shadowing each department.

DEPARTMENT	AUTOMATION	REPLACES	BUILT WITH	EFFORT
Safety & Compliance	Expiration tracker + reminders Start here CDL, med card, MVR, Clearinghouse, registrations, inspections, IFTA/IRP, COIs	Spreadsheet checks, missed renewals, out-of-service risk	Excel/SharePoint list, Power Automate or n8n, OCR for dates	1–2 weeks
Accounting / Billing	BOL/POD → invoice packet AI reads driver photos, matches them to the load, flags missing signatures or exceptions, assembles the packet	Manually matching paperwork and re-keying it into billing	Python + vision model with a human review queue for low-confidence fields	3–4 weeks
Recruiting	Applicant speed-to-lead + follow-ups Instant reply, qualification check, call-now alerts, day 1/3/7 nudges	Manual callbacks; applicants going cold	Web form, n8n, SMS + email, recruiting tracker	1–2 weeks
HR / Onboarding	Mobile document collection + DQ file checklist	Paper packets; chasing drivers for documents	Mobile forms, OCR, SharePoint folders per driver	2 weeks
Dispatch	Quote intake + rate-con extraction Rate confirmation PDFs parsed straight into the TMS; ETA updates to customers	Copy-paste from PDFs and emails	Email parsing, document AI, TMS API	2–4 weeks (depends on TMS)
All departments	AI inbox triage for shared mailboxes	Sorting and forwarding email by hand	Microsoft 365, Power Automate, LLM classification	2 weeks
Management	Weekly dashboard Loads, revenue per mile, driver pipeline, expirations, AR aging, CSA	Reports assembled by hand	Power BI or a lightweight web dashboard on SQL	2–3 weeks
Company-wide	Internal AI assistant over LDI policies and procedures	"Who do I ask?" interruptions	Business-tier AI restricted to LDI documents	1–2 weeks

Effort estimates assume access to the relevant systems and a point person per department; they get firmed up after discovery.

Back-of-envelope: paperwork time per load

Placeholder numbers below. Plug in LDI's real figures and the estimate updates.

Loads per week

500

Paperwork minutes per load

6

Share that can be automated (%)

60

Loaded staff cost (\$/hour)

28

30

staff hours saved per week

0.75

full-time equivalents freed up

\$43,680

per year in staff time

90-day plan

WEEKS 1-2

Discover + quick win

- On-site days shadowing Recruiting, Safety, Dispatch and Billing
- Map current systems: TMS, ELD, Microsoft 365, accounting
- Rank tasks by hours spent and error risk
- Ship the expiration tracker

WEEKS 3-6

Documents + applicants

- BOL/POD → invoice packet pipeline with human review
- Applicant speed-to-lead and follow-up sequence
- Mobile onboarding document collection

WEEKS 7-12

Connect + report

- Integrations between TMS, accounting and Microsoft 365
- Management dashboard
- Inbox triage; internal assistant if the need is real

ONGOING

Run it properly

- Every automation documented: what it does, who owns it, how to switch it off
- Run logs and failure alerts
- Short training per department

How remote work would run

- **30-minute weekly meeting** on Teams or Zoom: demo what shipped, agree on next week's priority
- **On-site when it matters:** discovery days at the start, and training when something goes live
- **Shared project board** so every department sees what's in progress
- **Async questions** by Teams or email between meetings

Security guardrails

- Driver and employee data stays in LDI-controlled accounts (Microsoft 365 / LDI cloud)
- Least-privilege access, removable on day one
- Business-tier AI APIs that don't train on LDI data; no driver data in consumer chat tools
- Audit logs on every automated action; a person approves anything non-routine
